Conversation Flows

> **Audience:** QA / product / developers
> **Purpose:** patient-facing WhatsApp journeys, step by step

Languages: Arabic and English — the bot replies in the patient's active language.

At a glance

Main menu

On entry (or after MENU / القائمة), the bot shows:

#	Option
1	Book appointment
2	Reschedule appointment

#	Option
3	Cancel appointment
4	Ask about doctors/specialties
5	Talk to reception

Patients can pick from the interactive menu or type an equivalent choice.

Global navigation

Action	How	Behavior
Main menu	Type MENU or القائمة	Clears the current draft → main menu
Step back	Type رجوع, Back, or similar	Moves **one** sensible step backward

Notes

- `MENU` works during active flows.
- Back is state-aware (e.g. time → date, date → doctor, doctor → path choice).
- Confirming a **cancellation** is separate from the global back command.

---

1) Book appointment

A — Choose search path

Bot asks:

- **By specialty**
- **By doctor name**

Path A1 — By specialty

1. Patient chooses **By specialty**.
2. Bot shows available specialties/departments.
3. Patient picks a specialty.
4. Bot shows doctors for that specialty (cards / selectable options).
5. Patient selects a doctor.
6. Continue from **shared booking steps**.

Path A2 — By doctor name

1. Patient chooses **By doctor name**.
2. Bot offers doctor selection by name (specialty as supporting text when available).
3. Patient selects a doctor.

4. Continue from **shared booking steps**.

Shared booking steps

Step	What happens
Date	Available dates for the selected doctor
Time	Available slots; **Change day** reopens date selection
Patient details	Reuse known name if available; else ask for name. DOB only if `REQUIRE_DOB` is enabled
Confirm	Summary → patient confirms
Success	Appointment created, slot reserved, reference returned

Alternatives / failures

Situation	Bot response
No doctors for option	Alternatives: other path, reception, menu
No dates/slots for doctor	Alternatives: another doctor, reception, menu
No slots on chosen day	Ask for another day
Slot hold expired / unavailable	Ask for another time

Back behavior (booking)

From	Back goes to
Doctor list (by specialty)	Specialty list
Doctor list (by name) / specialty list	Booking path choice
Date	Doctor selection
Time	Date selection
Patient details / confirmation	Time selection

2) Reschedule appointment

1. Patient chooses **Reschedule**.
2. Bot lists upcoming confirmed appointments (or asks for appointment reference).
3. If none → inform patient / helpful options.
4. Patient picks an appointment.
5. Bot asks what to change.
6. New date (when required).

7. New time slot.
8. Confirm update; slots released/updated.

Back behavior (reschedule)

From	Back goes to
Appointment list	Main menu
Change-type	Appointment list
Date	Change-type
Slot	Date
Confirm	Previous step in the chain

3) Cancel appointment

1. Patient chooses **Cancel**.
2. Bot lists upcoming confirmed appointments (or asks for reference).
3. If none → inform patient.
4. Patient picks an appointment.
5. Bot asks for cancellation confirmation.
6. On confirm → cancelled, slot released, reminders cancelled, confirmation sent.

Back behavior (cancel)

From	Back goes to
Confirmation	Appointment list
Appointment list	Main menu

4) Ask about doctors / specialties

1. Patient chooses inquiry from the main menu.
2. Bot offers inquiry options.
3. Patient can browse info and, where offered, continue into booking.

5) Talk to reception (handover)

1. Patient asks for reception, or bot escalates after unsupported/failed cases.
2. Bot acknowledges transfer.

3. System records handover context (phone, intent, transcript context, doctor/appointment if any).
4. Patient gets a clear handover message.
5. Outside hours / missing config → configured fallback message.

Voice note flow (summary)

Step	Action
1	Patient sends a voice note
2	Download + STT transcription
3	Extract intent / entities
4	Validate availability; advance guided flow when possible
5	Reply with next step or confirmation

> Voice is an alternate input into the **same** booking flows — not a separate product path.

Quick test checklist

- [ ] Main menu opens on first contact and after `MENU`
- [ ] Book by specialty completes end-to-end
- [ ] Book by doctor name completes end-to-end
- [ ] Change day works from the time list
- [ ] Reschedule updates an existing appointment
- [ ] Cancel removes an upcoming appointment
- [ ] رجوع / Back returns one step in booking/reschedule/cancel
- [ ] Inquiry and reception/handover respond correctly
- [ ] Voice note can start or continue a booking when speech is clear
