Known Issues

> **Audience:** developers / ops
> **Purpose:** known limitations and workarounds — update when fixed or newly confirmed

Status legend

Status	Meaning
Open	Confirmed; needs a fix or config change
Planned	Improvement already decided / in progress
By design	Expected behavior or platform constraint

Issue cards

1) GitHub Actions auto-deploy fails (SSH auth)

Field	Detail
Status	Open
Area	CI / Deploy

What happens

- Workflow `Deploy to Windows server` fails on push/merge to `main`.
- Typical error: SSH handshake / authentication failure (`publickey`).

Why

- The Action cannot authenticate to the Windows server with the configured SSH secrets/key.

Workaround

1. Merge to `main` as usual.
2. On server: `git pull`
3. Run migrations if needed
4. `Restart-Service HospitalChatbotBackend`
5. See `DEPLOY.md`

2) Doctor "carousel" is not a native WhatsApp carousel

Field	Detail
Status	Open / by design (platform constraint)
Area	Doctor browsing UX

What happens

- Patients expect a left/right photo carousel like some chatbot builders.
- Default flow shows **separate sequential image cards** (scroll the chat), not one official WhatsApp carousel bubble.

Why

- Official WhatsApp **carousel templates** need an approved marketing/template setup.
- Session messages cannot freely send that native carousel type.
- Default `send_doctor_cards` sends up to **5** interactive image cards in sequence.

Optional Flow path

- With `USE_DOCTOR_FLOW=true` + Flow ID → WhatsApp Flows **ImageCarousel** + radio list.
- Meta Flows ImageCarousel is limited (max **3** images in current code comments).
- If Flow is disabled/fails → fallback to sequential cards.
- Setup: `WHATSAPP_FLOW_SETUP.md`

Expectation

- Treat sequential cards (or Flow ImageCarousel when enabled) as the supported UX.
- Specialty path loads a limited doctor set for cards (small code limit, e.g. 5).

---

3) "By doctor name" list can hide doctors beyond the first page/limit

Field	Detail
Status	Planned improvement
Area	Booking → by doctor name

What happens

- **By doctor name** opens a WhatsApp list of doctors.
- Some active doctors may not appear if they fall outside the first-page/limit.
- The same doctor may still appear via **by specialty**.

Why

- WhatsApp list messages are capped at **10 rows**.

- Current code also requests a limited doctor set.
- Alphabetical ordering can push later names off the first page.

Planned direction

- Pagination and/or search-by-typed-name (not one unbounded list).

Temporary workaround

- Use **By specialty**, or type a doctor name if matching still finds them.

---

4) Local dashboard numbers may differ from server

Field	Detail
Status	By design
Area	Dashboard / environments

What happens

- `localhost:8501` KPIs can differ from `http://196.219.86.38:8501/`.

Why

- Local and server usually use different databases/config.

Workaround

- Treat the **server** dashboard as the official source for production numbers.
